

One website for the whole club

What the platform does – the members' side and the back-office side

Bayside Sport Club is a complete web portal for a family sports club – one site that serves both the members and the people who run the club, with access strictly separated by role. It opens with a public showcase (the club's history, its facilities, how to join), and everything else sits behind a member sign-in.

For members “My Bayside”, each member's personal portal

- **A dashboard** with today's facility status, open registrations and official announcements – the club's official news channel, with urgent notices displayed as a banner on every page
- **Club life:** sports schedules and coaches, competitions with online sign-up, the social events calendar, the dining menu and today's specials, community campaigns, the photo gallery
- **Self-service account:** profile, family members, classes, notification preferences, and dues paid online with receipts
- **An opt-in member directory** with connection requests – each member controls exactly what is visible
- **The Annual Meeting:** notice, proxies, and online voting with a personal token
- **An AI assistant** (the “Questions?” button on every page, also on WhatsApp) that answers from the site's live data, with the member's own permissions

For the back office the same site is the club's management tool

Front Office

A publishing console for official content: facility notices drafted automatically and published in under a minute, photos and albums, and moderation of member contributions – with strict protection of children's images. Everything can be corrected or archived; nothing is ever lost.

Management

Purchasing with department budgets and two-level approval (accounting, then General Manager above \$2,500); member payments with dues billing, unpaid-balance tracking and reminders; the Annual Meeting vote run end to end; and an outbox tracing every email the club sends.

Human Resources

Personnel files, contracts and leave balances; leave requests approved by HR then signed off by the General Manager; compensation (bonuses, raises) and annual performance reviews – all handled in the same tool, in full confidentiality.

Under the hood. A Next.js + Supabase application with a 55-table database behind row-level security: the separation between member, editor and management roles is enforced at the data layer, not just in the interface.
